

Microsoft 365 Ransomware Protection Bundle

All your files have been encrypted

Ransomware is one of the most common cyber attacks companies face. Most ransomware attacks start with phishing triggered by an email. Doing your best to secure your company's email is one of the best cybersecurity investments you can make. For **just \$8/month/user**, you get:

Managed Security Awareness Training

to educate staff on proper cybersecurity hygiene and how to spot phishing

Managed Inbox Detection & Response

for staff to easily differentiate and report malicious emails

Managed Cloud Backups

to restore customer data in Microsoft 365 in case of ransomware attack

Network Security Evaluation

to get an in-depth view of the current state of your network

Details

■ Eligibility:

- New customers
- TPx customers new to the services in the bundle (no renewals) or without bundle services at their site

■ Offer expires 7/31/2024

A successful ransomware attack can devastate any size organization, so put safeguards in place before they're needed.

75% of SMBs said they'd be able to survive only three to seven days following a ransomware attack. Research suggests that about 90% of successful breaches are caused by human error.
