What does it take to go all-in on AI?

Yes, the expectations are high. But are they clear?

64%

of CEOs consider AI their
top investment priority

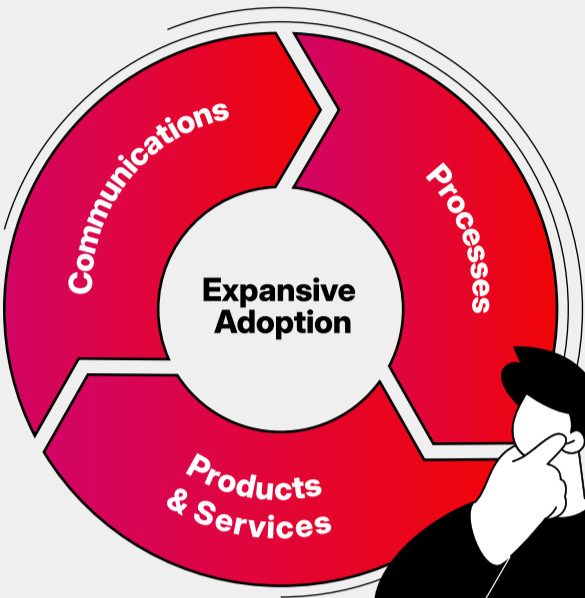

11%

of CIOs have implemented AI

Define your success.

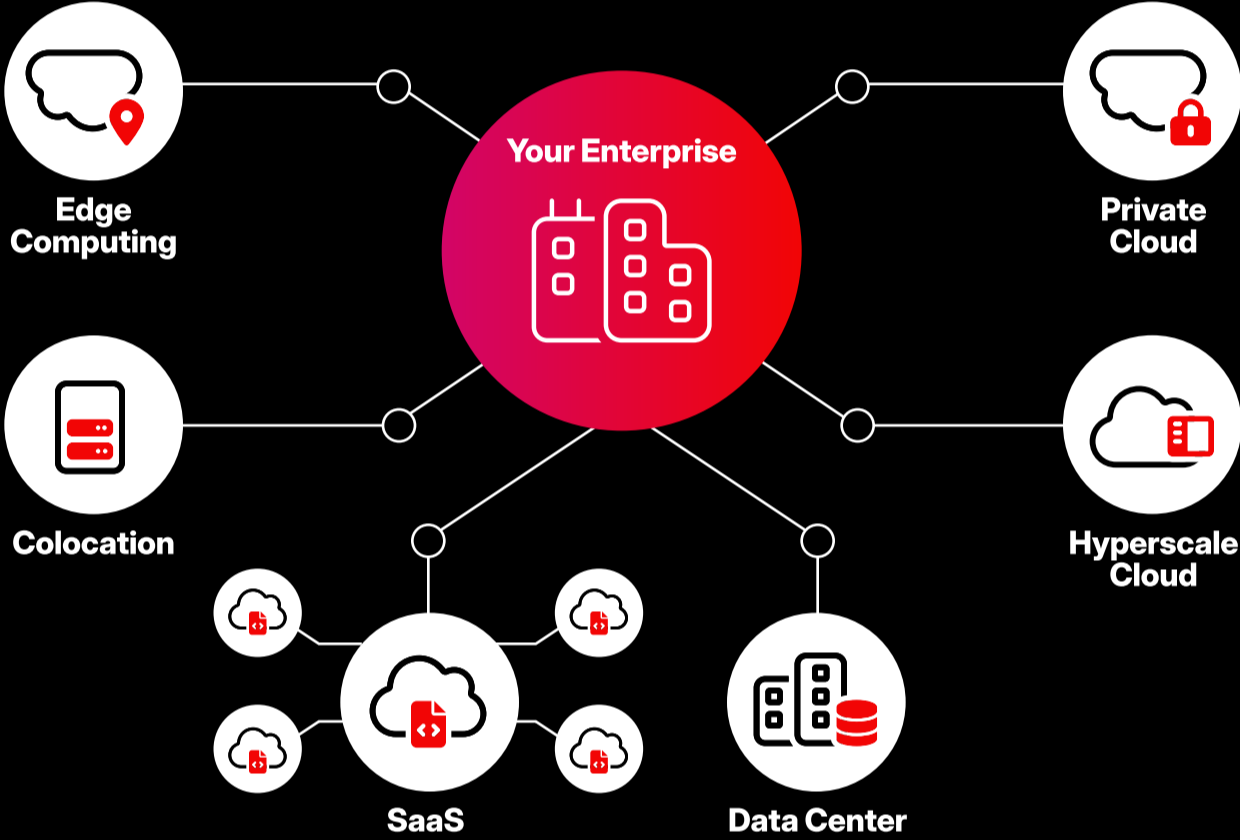

An AI Powered Enterprise is the ideal outcome for organizations. It's the embodiment of a nimble, modern, business that employs AI to drive business outcomes, optimize operations, and improve efficiency and output.

And it all hinges on data.

Data is the key to success.

Clean, accessible data doesn't just "feed" AI — it empowers organizations to extract real, sustainable value from their AI investments.

And protecting it is critical.

If your data is the key to unlocking customized AI insights, then protecting your data is essential to ensure trustworthy, reliable outcomes for your business.

Average ransom payment increased from \$400,000 in 2023 to \$2 million in 2024

Sophos

Chainalysis

The Critical Shift:
From AI to Resilient AI

Because an AI Powered Enterprise relies on data and system availability, a combination of disaster recovery, data protection, and AI services is the key to staying resilient.

The Expedient Path:
Delivering Resilient AI at Scale

Expedient helps you tackle three problems at once:

1

Accelerate your AI deployment

2

Fund your disaster recovery efforts

3

Implement testable, managed DR
